Highest performance.

Labconco has been protecting people since 1925. Take our fume hoods for example. We design every hood to maximize containment to keep hazardous fumes away from you and your lab.

Better containment means less air exhausted from the lab. The added benefit: saving energy.

When designing the Protector XStream, Premier and XL Laboratory Hoods, we scrutinized every component and repeatedly tested to help achieve maximum containment at lowest face velocities. The results of our efforts are three fume hood lines that exceed the SEFA 1 definition of a High Performance Fume Hood:

- 60 fpm or less face velocity
- At maximum sash opening height (25" minimum)
- Tested per ANSI/ASHRAE 110
  - Mannequin 3” from sash plane
  - Detector in the breathing zone
- 4.0 AM 0.05

Protector® Laboratory Fume Hoods

Features & Benefits

Opti-Zone™ baffle*

Protector XStream and XL Hoods feature chemical- and heat-resistant, fiberglass-reinforced composite panel liners with Opti-Zone baffles. Opti-Zone decreases the typical face velocity variations found with other baffles and provides horizontal flow. Its unique slot pattern and sizes increase velocities in the middle and at the work surface where it is needed while slowing velocities at the corners. This uniformity lowers the required average face velocity necessary for containment. Tapered entry slots decrease resistance to air entering the baffle and promote horizontal air streams that enhance containment.

One-piece molded fiberglass

Protector Premier Hoods have lightweight interior liners molded of specially formulated fiberglass reinforced polyester. It is durable, easy to clean, light reflective and fire resistant.

Labconco fiberglass withstands exposure to a wide range of laboratory acids, solvents and alkalies. It will not absorb spills and resists staining and discoloration. Its smooth one-piece surface with radiused corners has no cracks or crevices for contaminants to collect. Minimal maintenance is required.

*U.S. Patent No. 6,461,233
Protector® Laboratory Fume Hoods
Features & Benefits

**Vertical-rising tempered safety glass sash with anti-racking aircraft cable and pulley**
operates smoothly and quietly. Sash weight is contained in a pocket to counteract swing.

- **Clean-Sweep™ sash handle and tracks**
  have openings to bleed air into the hood chamber and direct chemical fume concentrations away from the user’s breathing zone. Slim-line radiused sash handle sweeps airflow in the hood with minimal turbulence. Clean-Sweep slots on the sash tracks of the corner posts enhance airflow.

- **Cord-Keeper™ slots**
  keep cords out of the way. Located on the left and right side of the air foil, they allow the sash to close completely when electrical cords from equipment inside are plugged into receptacles located on the corner posts.

- **Lighting.** Protector hoods have energy efficient LED lights rated for 50,000 hours of life that require infrequent replacement. Both lighting types are sealed behind ¼” thick safety glass, yielding a hood interior completely void of spark potential. Some Protector Premier Hood models are available with an explosion-proof incandescent light fixture.

- **Eco-Foil™ air foil**
  reduces energy consumption by 7-10% compared to flat air foils. Aerodynamic curve allows air to sweep the work surface maximizing containment. Clean-Sweep™ openings pull inflow air from under the air foil forcing air into non-turbulent air streams. Curve is comfortable for resting arms.

- **Color-coded service fixtures.** Interior-mounted serrated hose tips for gas, air, water, vacuum and other services have remote control knobs on the corner posts for use regardless of sash position. Every hood is factory prepared for up to four fixtures on each side (eight total). Contact Labconco if more than eight fixtures are needed.

- **Service access plates**
  provide front access to plumbing connections to simplify installation and service.

**Labconco exclusive feature**

*U.S. Patent No. 6,461,233*
Intelli-Sense™ automatic sash position system
Intelli-Sense automatic sash position system, for hoods 8’ wide or smaller, offers maximum safety, increased energy conservation and ADA compliance. The sash automatically opens when motion is detected. After motion is no longer detected, sash automatically closes after a user-set delay time period. When used with a variable air volume (VAV) system, reduced exhaust air demand lowers operation cost. Hands-free operation lets users with limited reach lower the sash.

Two sensors work in concert. An adjustable passive infra-red occupancy sensor detects motion in front of the hood. The “sensed area” may be adjusted up to 48” away. The sash remains open as long as motion is detected in the sensor area. A second sensor located at the bottom of the sash has horizontal line of sight to detect obstructions. When an obstruction is detected, the closing sash stops its downward travel.

Settings may be customized. User-set delay time allows the sash to close 1, 3, 6, 10, 30 or 60 minutes after motion is no longer detected. Other setting options include open position, closed position and “down only.”

An override feature allows the sash to be manually opened or closed without the automatic system interfering. Alternatively, a momentary rocker switch on the front of the hood may be used to raise and lower the sash while the override feature is activated. A foot switch is available as an accessory.

Chain and sprocket sash system
This option offers durability, low maintenance and effortless lifting from any point along the hood’s width.

Auto-return sash system
Auto-return promotes the use of the sash as a physical barrier. Using a chain and sprocket suspension, the system automatically returns to 18” working sash opening height anytime the sash is raised above its set position. A defeatable stop holds the sash in its full open position during loading and unloading of oversized apparatus. Auto-return is available on Protector XStream, Premier and XL Hoods 8’ wide and smaller.

Split-dual sash system
Available on Protector Premier and XL Hoods, 8’ wide and larger, dual vertical-rising sashes use a cord, cable and pulley system that allows one sash to be raised while the other sash remains closed. Keeping one sash closed provides a physical barrier of protection for fume-generating equipment that occupies one side of the hood while you use the other side of the hood.

Combination sashes
Combination vertical-rising/horizontal-sliding sashes offer the advantages of both sash types. For energy conservation, the hood’s air volume is based on its smaller horizontal-sliding sash opening. To maintain safe face velocities, sash stops limit opening the vertical-rising sash beyond 50% except when you release it during loading or unloading. Hoods with this option come standard with chain and sprocket, stationary viewing window above the horizontal-sliding sashes, and a by-pass block.

Pivoting flush air foil
Clean-Sweep openings enhance airflow and promote containment. An integral trough prevents spills on the work surface from leaking out the front of the hood. The trough is even with the supporting work surface (sold separately) so the trough stays hidden from view and flush with the work surface. The air foil pivots up for cleaning. Cord-Keeper slots on both sides allow electrical cords to pass through.

Contact Labconco for ordering information on these and other built-in custom options.

   - Blower*
   - Damper
   - Weathercap

*Some Protector Premier Hoods include built-in blower.
**Unsurpassed safety.**

No hood is safer than the patented Protector XStream Laboratory Hood. Testing proves it.

During independent ASHRAE 110 testing**, the Protector XStream Hood was challenged well beyond the SEFA 1 standard. With a face velocity of 40 fpm and sash fully open, the Protector XStream was subjected to 50 fpm cross drafts, NIH protocol, and tracer gas measurements in the chest of the mannequin. In all scenarios, the Protector XStream allowed 0.00 ppm average level of tracer gas outside the fume hood. Although your safety officer or industrial hygienist will determine the actual face velocity setting for your lab, the ability of the Protector Hood to contain under these adverse conditions sets a new standard of safety.

**Save energy and money.**

Energy savings is equally impressive. Although face velocity is a factor, it’s the **volumetric rate (CFM)** that determines the energy consumption of a fume hood. Operating a 6’ Protector XStream Hood at 60 fpm face velocity, with the sash in its fully open position, requires only **690 CFM**. Regardless of your desired operating face velocity, the Protector XStream yields the **lowest required CFM**.

Energy savings translates to dollar savings. The Protector XStream Hood provides an excellent economic payback when compared to traditional by-pass hoods operated at 80 or 100 fpm with sash fully open. For example, a 6’ Protector XStream Hood operated at 60 fpm face velocity consumes a mere 690 CFM. Compare that to a traditional by-pass hood operated at 100 fpm that consumes 1250 CFM. You achieve annual dollar savings per year of $3920.**

For even greater savings, the Protector XStream may be factory-prepared to accommodate a VAV system without the need for by-pass modifications.

---

**Traditional By-Pass Hood Design**

Smoke tests on traditional hoods demonstrate the tendency for contaminants generated in the interior to roll forward producing high concentrations of contaminants behind the sash in close proximity to the user’s breathing zone.

**Protector XStream Hood Design**

In contrast, smoke tests on the Protector XStream show contaminants removed in a single pass and a lack of turbulence. Horizontal air flowing toward the baffle forces contaminants to the rear interior, away from the user. The upper dilution air supply sweeps the upper interior to eliminate stagnant pockets of air and to prevent contaminants from concentrating behind the sash. This airflow pattern is accomplished without additional blower(s) or moving components.
All models feature:
• By-pass airflow design with variable air volume compatibility
• Eco-Foil™ air foil with aerodynamic Clean-Sweep™ airflow openings*
• Cord-Keeper™ slots on left and right side of air foil
• Upper dilution air supply*
• Glacier white powder-coated steel exterior
• Rear downflow dual baffle system*
• Chemical-resistant, fiberglass-reinforced, composite panel liner and baffles with flame spread index less than 25 per ASTM E84**. Baffles removable for cleaning
• Opti-Zone™ baffle with tapered slots*
• Tempered safety glass vertical-rising sash with cable and pulley
• Powder-coated aluminum sash handle with aerodynamic Clean-Sweep™ openings*
• 37.5" (95.3 cm) high sightline from the work surface to the header panel
• Removable front and side panels, and front and interior service access panels
• Pre-wired LED lighting with vapor-proof design and ADA-compliant light and blower switches. Lighting is rated for 50,000 hours
• Sash stop located at 18" (45.7 cm) sash opening position
• Powder-coated stainless steel, 12.8" (32.5 cm) ID exhaust connection(s)

Standards conformance & regulations:
• ADA
• CFR 29, Part 1910**
• SEFA 1**
• NFPA 45**
• ASTM E84-09C**
• ASHRAE 110**
• ANSI Z9.5**

⚠️ Labconco exclusive feature

• CAN/CSA C22.2 No. 61010-1**
• UL 1805
• CE Conformity Marking (230V models)**
• SEFA 8**

⚠️ WARNING: Cancer - P65Warnings.ca.gov (California only)

Fixtured models feature:
• Two pre-plumbed service fixtures with forged brass valves, lower right side with brass tubing for gas and lower left side with copper tubing for cold water. Components for converting either or both fixtures to air and vacuum are provided. Inlet tubing is not provided
• One pre-wired GFCI electrical duplex receptacle on lower right side and, on 8’ models only, one additional pre-wired GFCI electrical duplex receptacle on lower left side

Required accessories (not included):
• Remote blower. Contact Labconco
• Ductwork. Contact Labconco
• Work surface. See pages 17-18
• Base cabinet or stand. Contact Labconco

Optional accessories for on-site installation include:
• Service Fixture Kits. See page 19
• Electrical Duplex Kits. See page 20
• Guardian Airflow Monitor Kits. See page 20
• Ceiling Enclosure, Rear Finish Panel Kits and Distillation Grid Kits. Contact Labconco

*U.S. Patent No. 6,461,233
**See page 21 for list of regulations, standards and registered trademarks.

⚠️ Heights of switches and electrical receptacles meet requirements of Americans with Disabilities Act (ADA) when work surface is set to ADA height.

Energy Savings Dollars Compared to a Typical Fume Hood

Protector XStream shows significant savings over its lifetime when compared to a typical fume hood. Maximum savings are achieved using the Protector XStream operating at 60 fpm with a VAV system. Please contact Labconco for ordering information on factory preparing Protector XStream Hoods to a specific VAV controller cutout.

| 6' Typical Hood @ 100 fpm, full open sash (28"), constant volume† | 1250 | $8,750 | $131,250 | 0 |

With Built-In Blower Specifications

All models feature:
• By-pass airflow design
• Built-in belt-driven, corrosion-resistant exhaust blower with adjustable sheave, molded thermoplastic housing and non-sparking, coated aluminum impeller

*Eco-Foil™ air foil with aerodynamic Clean-Sweep™ airflow openings*
*Cord-Keeper™ slots on left and right side of air foil
*Glacier white powder-coated steel exterior
*One-piece molded fiberglass liner and pre-set removable baffle(s) with flame spread less than 25 per ASTM E84**
*Tempered safety glass vertical-rising sash and cable and pulley
*Powder-coated aluminum sash handle with Clean-Sweep™ openings*
*37.5° (95.3 cm) high sightline from the work surface and header panel
*Removable front and side panels, and front service access panels for access to plumbing and electrical wiring

10.8" ID exhaust connection (4' models); 12.8" ID exhaust

Standard models feature:
• Pre-wired LED lighting with vapor-proof design, and ADA-compliant light and blower switches. Lighting is rated for 50,000 hours

Fixtured models feature:
• Two pre-plumbed service fixtures with forged brass valves, lower right side with brass tubing for gas and lower left side with copper tubing for cold water. Components for converting either or both fixtures to air and vacuum are provided. **Inlet tubing is not provided**
• One pre-wired GFCI electrical duplex receptacle on lower right side

Protector® XL™ Laboratory Fume Hoods

Specifications

All models feature:
- By-pass airflow design
- Eco-Foil™ air foil with aerodynamic Clean-Sweep™ airflow openings
- Cord-Keeper™ slots on left and right side of air foil
- Glacier white powder-coated steel exterior
- Chemical-resistant, fiberglass-reinforced, composite panel liner and baffle
- Opti-Zone™ baffle* with flame spread index less than 25 per ASTM E84**. Baffle is removable for cleaning
- Tempered safety glass vertical-rising sash and cable and pulley
- Powder-coated aluminum sash handle with Clean-Sweep™ openings
- 37.5" (95.3 cm) high sightline from the work surface and header panel
- Removable front and side panels, and front and interior service panels for access to plumbing and electrical wiring
- Pre-wired LED lighting with vapor-proof design and ADA-compliant light and blower switches. Lighting rated for 50,000 hours
- Powder-coated stainless steel, 12.81" (32.5 cm) ID exhaust connection(s)

Standards conformance & regulations:
- ADA
- CFR 29, Part 1910**
- SEFA 1**
- NFPA 45**
- ASTM E84-09C**
- ASHRAE 110**
- ANSI Z9.5**
- UL 61010-1**
- CAN/CSA C22.2 No. 61010-1**
- UL 1805
- CE Conformity Marking (230V models)**
- SEFA 8**

⚠️ WARNING: Cancer - P65Warnings.ca.gov (California only)

* Labconco exclusive feature

8' models available with:
- Optional split dual tempered safety glass vertical-rising sashes with cable and pulleys and powder-coated sash handles

10', 12' and 16' models feature:
- By-pass block
- Split dual tempered safety glass vertical-rising sashes with cable and pulleys, powder-coated sash handles and 10" (25.4 cm) high static viewing windows to permit the sashes to be fully raised without extending above the hood. Four sashes on 16' models

Fixtured models feature:
- Two pre-plumbed service fixtures with forged brass valves, lower right side with brass tubing for gas and lower left side with copper tubing for cold water. Components for converting either or both fixtures to air and vacuum are provided. Inlet tubing is not provided
- One pre-wired GFCI electrical duplex receptacle on lower right side and, on 8' and larger models only, one additional pre-wired GFCI electrical duplex on lower left side

Required accessories (not included):
- Remote blower. Contact Labconco
- Ductwork. Contact Labconco
- Work surface. See pages 17-18
- Base cabinet or stand. Contact Labconco

Optional accessories for on-site installation include:
- Service Fixture Kits. See page 19
- Electrical Duplex Kits. See page 20
- Guardian Airflow Monitor Kits. See page 20
- Sash Stop Kits. See page 20
- Ceiling Enclosure, Rear Finish Panel Kits and Distillation Grid Kits. Contact Labconco

* U.S. Patent No. 6,461,233
** See page 21 for list of regulations, standards and registered trademarks
⚠️ Heights of switches and electrical receptacles meet requirements of ADA when work surface is set to ADA height.

Catalog Number Configurator:
Use this key to configure the nine digit catalog number to order your Protector XL Laboratory Hood.

Select the **WIDTH** of your fume hood. This is the fourth digit of your catalog number. Shipping weight is also noted. Add 10 lbs. (5 kg) for fixtured models.

- 3 = 3’ (91 cm), 350 lbs. (159 kg)
- 4 = 4’ (122 cm), 375 lbs. (170 kg)
- 5 = 5’ (152 cm), 450 lbs. (204 kg)
- 6 = 6’ (183 cm), 525 lbs. (238 kg)
- 7 = 7’ (213 cm), 600 lbs. (272 kg)
- 8 = 8’ (244 cm), 675 lbs. (306 kg)
- 0 = 10’ (305 cm), 855 lbs. (388 kg)
- 1 = 12’ (366 cm), 1045 lbs. (474 kg)
- 2 = 16’ (488 cm), 1410 lbs. (640 kg)

Select the **EXTERIOR DEPTH** of your fume hood. This is the fifth digit of your catalog number. To the shipping weight noted above, add 40 lbs. (18 kg) for 37.7” deep models and 85” (39 kg) for 43.7” deep models.

- 0 = 31.7” (81 cm)
- 1 = 37.7” (96 cm)
- 2 = 43.7” (111 cm)

Select the **SASH STYLE** available for your hood width. Note that either style may be used on 8’ wide hoods. This is the sixth digit of your catalog number.

- Single
- Dual* —

Select the **ELECTRICAL REQUIREMENTS, SERVICE FIXTURES and GFCI ELECTRICAL DUPLEX RECEPTACLE** of your fume hood. These are the eighth and ninth digits of your catalog number.

**9410300 – Sash Stop Kit.** Restricts how far a vertical-rising sash may be opened. Easily field installed on the fixture panel of many of our popular hoods. Protector XStream Hoods, Premier Hoods and 3’ to 12’ XL Hoods have been factory-prepared to accommodate a sash stop at the 60%–62.5% open position (18” to work surface). May also be placed at 50% open position (14” to work surface). Alternate sash positions may be field drilled. Includes components for one sash. Two kits are required for 10’ and 12’ XL Hoods. Not for use on 16’ XL Hoods. Plastic. Shipping weight 0.5 lb. (0.2 kg)

**Guardian™ Airflow Monitors.** Sense and alert you to low airflow conditions. From the monitor’s face plate, you can easily select and calibrate a set point between 30 and 250 fpm using a velocity meter and a screwdriver. Audible/visual alarm. Include night setback, external alarm and alarm mute functions. Flush-mount design. Requires field calibration.

**Guardian™ Digital Airflow Monitors.** Sense and alert you to low airflow conditions. LCD displays actual airflow in fpm or m/sec. Audible/visual alarm alerts you to sustained low velocity condition. LCD displays calibration instructions. Contact Labconco for optional temperature sensor or optional RS-485 port for Modbus** RTU communication. Flush-mount design. Requires field calibration.

Standards & Registered Trademarks

Standards

Key aspects of standards and codes as they relate to laboratory ventilation are summarized below.

**ASHRAE 110 Method of Testing Performance of Laboratory Fume Hoods (ANSI Approved)**

Evaluates fume hood’s containment characteristics.
- Three part test: Smoke generation, face velocity profile, tracer gas release @ 4 liters per minute
- Rated As Manufactured (AM), As Installed (AI) and As Used (AU)

**American Society of Heating, Refrigerating and Air-Conditioning Engineers**

1791 Tullie Circle NE
Atlanta, GA 30329
(404) 639-7400
ashrae.org

**ANSI Z9.5 Standard — Laboratory Ventilation**

Covers entire laboratory ventilation system.
- Vertical stack discharge @ 2000-3000 fpm
- New and remodeled hoods shall have a monitoring device
- Ductless hoods should only be used with non-hazardous materials

**American Industrial Hygiene Association**

2700 Prosperity Avenue, Suite 250
Fairfax, VA 22031
(703) 849-8888
aiha.org

**Federal Register 29 CFR Part 1910**

Occupational exposure to hazardous chemicals in laboratories

**National Research Council Recommendations Concerning Chemical Hygiene in Laboratories (Non-mandatory) from “Prudent Practices”**

- Fume hoods should have a continuous monitoring device
- Face velocities should be between 60-100 linear feet per minute (lfpm)
- Average 2.5 linear feet of hood space per person

**Occupational Safety & Health Administration**

U.S. Department of Labor

200 Constitution Avenue, NW
Washington, DC 20210
(202) 693-1950
osha.gov

**ASTM E84-09C Standard Test Method for Surface Burning Characteristics of Building Materials**

Determines the relative burning behavior of the material by observing the flame spread along the specimen.
- Measures the flame spread and smoke development
- Material is exposed to flaming fire for 10 minutes and the results measured and recorded
- Results are compared to the indexes of mineral fiber cement board (flame spread and smoke development of zero) and red oak flooring (smoke development of 100)

**ASTM International**

100 Barr Harbor Drive
P.O. Box C700
West Conshohocken, PA 19428-2959
(610) 832-9885
astm.org

- Laboratory hoods should not be relied on for explosion protection
- Fume hood exhaust air should not be recirculated
- Services should be external to the hood
- Materials of construction should have flame spread of 25 or less

**National Fire Protection Association**

1 Batterymarch Park
Quincy, MA 02169-7471
(800) 344-3555 or (817) 770-3000
nfpa.org

**NIH - Section 15991 Onsite Testing for Constant Volume Hoods - June 2006**

- Follows ASHRAE test methods except for the following:
  - 1.6 L tracer gas release rate instead of 4 L
  - 2. Hood is loaded with boxes and cans
  - 3. Rapid walk-by test

**National Institutes of Health**

9000 Rockville Pike
Bethesda, MD 20892
(301) 496-5000
nih.gov

**SEFA 1 Laboratory Fume Hoods Recommended Practices**

- High performance fume hood definition: hood with sash fully open and operating at 60 fpm contains at 4.0 AM 0.05
- Covers design, installation, testing, maintenance and safe use of laboratory fume hoods

**SEFA 8 Recommended Practices For Metal Laboratory Grade Furniture, Casework, Shelving and Tables, 8.0 Cabinet Surface Finish Tests**

 Defines test methods for evaluating the finish of laboratory furniture.
- Laboratory grade paint finishes shall withstand chemical exposure, hot water, and impact from a one-pound ball dropped from 12’
- Paint coating shall sufficiently adhere to the substrate
- Paint shall be resistant to scratches

**Sealed Air Laboratories**

1205 Franklin Avenue, Suite 320
Garden City, NY 11530
(516) 294-5424
sealedabs.com

**UL 61010-1 Electrical Equipment for Laboratory Use**

Specifies the general safety requirements for electrical equipment.
- Based on International Electrotechnical Commission (IEC) Publication 61010-1 with differences noted for U.S. use
- Tests for protection against electrical shock, mechanical hazards, spread of fire, radiation, liberated gases, explosion and implosion
- Tests for resistance to shock, vibration, impact, heat, moisture and liquids

**Underwriters Laboratories Inc.**

333 Pfingsten Road
Northbrook, IL 60062-2096
(847) 272-8800
ul.com

**CAN/CSA Standard C22.2 No. 6010-1 Safety Requirements for Electrical Equipment for Measurement, Control and Laboratory Use**

Specifies general safety requirements for electrical equipment.
- Design and methods of construction should provide adequate protection to the operator and the surrounding area against shock or burn, mechanical hazards, excessive temperature, spread of fire from the equipment, gas liberation, explosion or implosion

**Canadian Standards Association**

55 Metcalfe Street, Suite 600
Ottawa, On
K1P 6L5, Canada
(613) 238-3222
csagroup.org

**ETL listing**

ETL Testing Laboratories is a Nationally Recognized Testing Laboratory (NRTL). The ETL mark signifies that a product conforms to the following:
- UL Standard 61010-1 in the U.S.
- CAN/CSA Standard C22.2 No. 61010.1 in Canada
- Products that bear the ETL mark are subjected to a comprehensive safety program that includes testing, listing, labeling and quarterly follow-up inspections

**Intertek Group**

intertek.com

**CE Marking**

Indicates an electrical apparatus conformity to all safety and other directives/specifications presently required by the Council of European Communities.
- Electrical safety
- Electromagnetic emissions testing — interference signals being output by the product
- Electromagnetic immunity testing — the product does not respond to outside electromagnetic interference signals

**European Union**
